---

Experienced back-end developer with a strong focus on Golang, NodeJS, and scalable systems. I specialize in building high-performance APIs and working with both NoSQL (MongoDB) and SQL (PostgreSQL) databases. My experience extends to using tools like Sequelize, Prisma, and GraphQL for efficient data management and system design. I am adept at developing secure and efficient back-end solutions, ensuring optimal performance, and leveraging cloud infrastructure. My background in full-stack development provides a solid foundation for collaborative work, but I am now focused on mastering advanced Golang backend technologies and system architecture.
